

- Check the length of both strings. If they are not the same it cannot be an anagram at all
- Initialize two hashmaps for both strings
- Loop over the length of variable1
 - If you have not seen a letter yet in variable 1 or 2 add it to the hashMap and increase the counter by 1
 - If you have seen a letter in variable 1 or 2 add it to the hashMap counter
 - Return comparing the lengths of the two hashMaps
